FCC REPORT

(Bluetooth)

Applicant: NEXUS TELECOM SERVICES (HK) LIMITED

Address of Applicant: R112, 11/F Hollywood Plaza, Mangkok, Kowloon Hong Kong

Equipment Under Test (EUT)

Product Name: MOBILE PHONE

Model No.: GO1003

Trade mark: GOMOBILE

FCC ID: 2AHDFGO1003

Applicable standards: FCC CFR Title 47 Part 15 Subpart C Section 15.247

Date of sample receipt: 23 Feb., 2017

Date of Test: 23 Feb., to 14 Mar., 2017

Date of report issued: 15 Mar., 2017

Test Result: PASS *

* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Bruce Zhang Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the CCIS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

4 Test Summary

| Test Item | Section in CFR 47 | Result |
|----------------------------------|-------------------|--------|
| Antenna Requirement | 15.203/15.247 (c) | Pass |
| AC Power Line Conducted Emission | 15.207 | Pass |
| Conducted Peak Output Power | 15.247 (b)(1) | Pass |
| 20dB Occupied Bandwidth | 15.247 (a)(1) | Pass |
| Carrier Frequencies Separation | 15.247 (a)(1) | Pass |
| Hopping Channel Number | 15.247 (a)(1) | Pass |
| Dwell Time | 15.247 (a)(1) | Pass |
| Radiated Emission | 15.205/15.209 | Pass |
| Band Edge | 15.247(d) | Pass |

Pass: The EUT complies with the essential requirements in the standard.

5.2 General Description of E.U.T.

| Product Name: | MOBILE PHONE |
|------------------------|---|
| Model No.: | GO1003 |
| Operation Frequency: | 2402MHz~2480MHz |
| Transfer rate: | 1/2/3 Mbits/s |
| Number of channel: | 79 |
| Modulation type: | GFSK, π/4-DQPSK, 8DPSK |
| Modulation technology: | FHSS |
| Antenna Type: | Internal Antenna |
| Antenna gain: | 0.36 dBi |
| Power supply: | Rechargeable Li-ion Battery DC3.8V-2200mAh |
| AC adapter: | Model: GO1003 Input: AC100-240V 50/60Hz 0.12A Output: DC 5.0V, 1000mA |

5.3 Test mode

| • | o.o restillode | |
|---|--------------------|--|
| | Transmitting mode: | Keep the EUT in transmitting mode with worst case data rate. |
| | Remark | GFSK (1 Mbps) is the worst case mode. |

Report No: CCISE170202002

Project No.: CCISE1702020

The sample was placed 0.8m(below 1GHz)/1.5m(above 1GHz) above the ground plane of 3m chamber*. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working with a fresh battery, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

5.4 Measurement Uncertainty

| Items | Expanded Uncertainty (Confidence of 95%) |
|-------------------------------------|--|
| Conducted Emission (9kHz ~ 30MHz) | 2.14 dB (k=2) |
| Radiated Emission (9kHz ~ 30MHz) | 4.24 dB (k=2) |
| Radiated Emission (30MHz ~ 1000MHz) | 4.35 dB (k=2) |
| Radiated Emission (1GHz ~ 18GHz) | 4.44 dB (k=2) |
| Radiated Emission (18GHz ~ 26.5GHz) | 4.56 dB (k=2) |

5.5 Laboratory Facility

The test facility is recognized, certified, or accredited by the following organizations:

● FCC - Registration No.: 817957

Shenzhen Zhongjian Nanfang Testing Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in out files. Registration 817957, February 27, 2012.

■ IC - Registration No.: 10106A-1

The 3m Semi-anechoic chamber of Shenzhen Zhongjian Nanfang Testing Co., Ltd. has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 10106A-1.

CNAS - Registration No.: CNAS L6048

Shenzhen Zhongjian Nanfang Testing Co., Ltd. is accredited to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration laboratories for the competence of testing. The Registration No. is CNAS L6048.

5.6 Laboratory Location

Shenzhen Zhongjian Nanfang Testing Co., Ltd.

Address: No. B-C, 1/F., Building 2, Laodong No.2 Industrial Park, Xixiang Road,

6 Test results and Measurement Data

6.1 Antenna requirement

Standard requirement:

FCC Part 15 C Section 15.203 /247(c)

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

E.U.T Antenna:

The Bluetooth antenna is an integral antenna which permanently attached, and the best case gain of the antenna is 0.36 dBi.

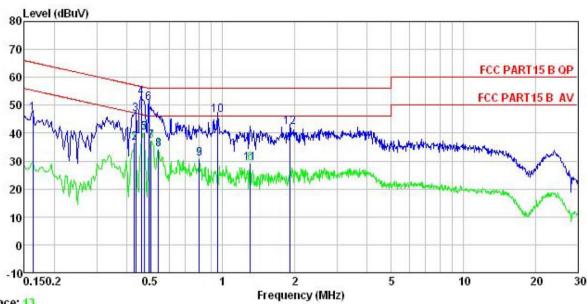

6.2 Conducted Emissions

| Test Requirement: | FCC Part 15 C Section 1 | 5.207 | | | | | |
|-----------------------|---|--------------------------|-----------|--|--|--|--|
| Test Method: | ANSI C63.4:2014 | | | | | | |
| Test Frequency Range: | 150 kHz to 30 MHz | | | | | | |
| Class / Severity: | Class B | | | | | | |
| Receiver setup: | RBW=9 kHz, VBW=30 k | Hz Sweep time=auto | | | | | |
| Limit: | Frequency range | Limit (| dBuV) | | | | |
| LIIIII. | (MHz) | Quasi-peak | Average | | | | |
| | 0.15-0.5 | 66 to 56* | 56 to 46* | | | | |
| | 0.5-5 | 56 | 46 | | | | |
| | 5-30 60 5 | | | | | | |
| | * Decreases with the log | arithm of the frequency. | | | | | |
| Test setup: | Reference | e Plane | | | | | |
| | AUX Equipment Test table/Insulation plane Remark E.U.T EMI Receiver Receiver Receiver | | | | | | |
| Test procedure: | The E.U.T and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs). Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4: 2014 on conducted measurement. | | | | | | |
| Test Instruments: | Refer to section 5.7 for d | letails | | | | | |
| Test mode: | Bluetooth (Continuous transmitting) mode | | | | | | |
| Test results: | Pass | | | | | | |

6.7 Dwell Time

| Test Requirement: | FCC Part 15 C Section 15.247 (a)(1) | |
|-------------------|---|--|
| Test Method: | ANSI C63.10:2013 and KDB DA00-705 | |
| Receiver setup: | RBW=1 MHz, VBW=1 MHz, Span=0 Hz, Detector=Peak | |
| Limit: | 0.4 Second | |
| Test setup: | Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane | |
| Test Instruments: | Refer to section 5.7 for details | |
| Test mode: | Hopping mode | |
| Test results: | Pass | |

Measurement Data (Worse case):

| Mode | Packet | Dwell time (second) | Limit (second) | Result |
|-----------|--------|---------------------|----------------|--------|
| | DH1 | 0.12480 | | |
| GFSK | DH3 | 0.26688 | 0.4 | Pass |
| | DH5 | 0.31232 | | |
| | 2-DH1 | 0.12736 | | |
| π/4-DQPSK | 2-DH3 | 0.26592 | 0.4 | Pass |
| | 2-DH5 | 0.31317 | | |
| | 3-DH1 | 0.12800 | | |
| 8DPSK | 3-DH3 | 0.26688 | 0.4 | Pass |
| | 3-DH5 | 0.31232 | | |

For GFSK, $\pi/4$ -DQPSK and 8DPSK:

The test period: T= 0.4 Second/Channel x 79 Channel = 31.6 s

DH1 time slot=0.390*(1600/(2*79))*31.6=124.80ms DH3 time slot=1.668*(1600/(4*79))*31.6=266.88ms DH5 time slot=2.928*(1600/(6*79))*31.6=312.32ms

2-DH1 time slot=0.398*(1600/ (2*79))*31.6=127.36ms 2-DH3 time slot=1.662*(1600/ (4*79))*31.6=265.92ms

2-DH5 time slot=2.936*(1600/ (6*79))*31.6=313.17ms

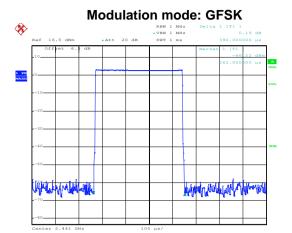

3-DH1 time slot=0.400*(1600/ (2*79))*31.6=128.00ms

3-DH3 time slot=1.668*(1600/ (4*79))*31.6=266.88ms

3-DH5 time slot=2.928*(1600/ (6*79))*31.6=312.32ms

Report No: CCISE170202002

6.8 Pseudorandom Frequency Hopping Sequence

Test Requirement: FCC Part 15 C Section 15.247 (a)(1) requirement:

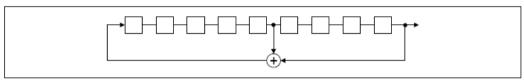

Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater.

Alternatively. Frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW. The system shall hop to channel frequencies that are selected at the system hopping rate from a Pseudorandom ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter. The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in synchronization with the transmitted signals.

EUT Pseudorandom Frequency Hopping Sequence

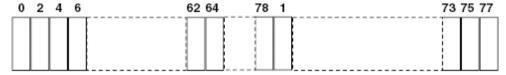

The pseudorandom sequence may be generated in a nine-stage shift register whose 5th and 9th stage outputs are added in a modulo-two addition stage. And the result is fed back to the input of the first stage. The sequence begins with the first ONE of 9 consecutive ONEs; i.e. the shift register is initialized with nine ones.

- Number of shift register stages: 9
- Length of pseudo-random sequence: 29 -1 = 511 bits
- Longest sequence of zeros: 8 (non-inverted signal)

Linear Feedback Shift Register for Generation of the PRBS sequence

An example of Pseudorandom Frequency Hopping Sequence as follow:

Each frequency used equally on the average by each transmitter.

The system receivers have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shift frequencies in synchronization with the transmitted signals.

6.9 Band Edge

6.9.1 Conducted Emission Method

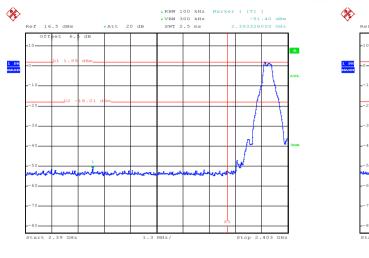

| Test Requirement: | FCC Part 15 C Section 15.247 (d) | |
|-------------------|---|--|
| Test Method: | ANSI C63.10:2013 and DA00-705 | |
| Receiver setup: | RBW=100 kHz, VBW=300 kHz, Detector=Peak | |
| Limit: | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. | |
| Test setup: | Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane | |
| Test Instruments: | Refer to section 5.7 for details | |
| Test mode: | Non-hopping mode and hopping mode | |
| Test results: | Pass | |

| | Above 10 | SHZ | 74.00 | | Peak Value | | | |
| | WWWWWW 1849 | (Turntable) | 3m Ground Reference Plane | n Antenna To | ower | | | |
| Test Procedure: | The EUT was placed on the top of a rotating table 1.5meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or | | | | | | | |
| Test Instruments: | Refer to sectio | | ed and then rep | | | | | |
| Test mode: | Non-hopping m | | | | | | | |
| Test results: | Passed | | | | | | | |
| Pomark: | | | | | | | | |

Remark:

- 1. During the test, pre-scan the GFSK, $\pi/4$ -DQPSK, 8DPSK, and all data were shown in report.
- 2. Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis is the worst case.

6.10 Spurious Emission

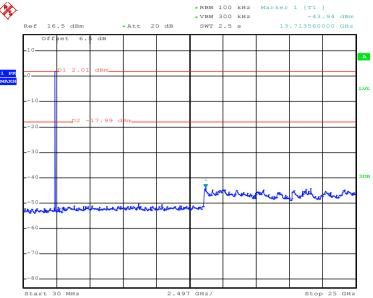

6.10.1 Conducted Emission Method

| Test Requirement: | FCC Part 15 C Section 15.247 (d) | | | | | | | |
|-------------------|---|--|--|--|--|--|--|--|
| Test Method: | ANSI C63.10:2013 and DA00-705 | | | | | | | |
| Limit: | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. | | | | | | | |
| Test setup: | Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane | | | | | | | |
| Test Instruments: | Refer to section 5.7 for details | | | | | | | |
| Test mode: | Non-hopping mode | | | | | | | |
| Test results: | Pass | | | | | | | |

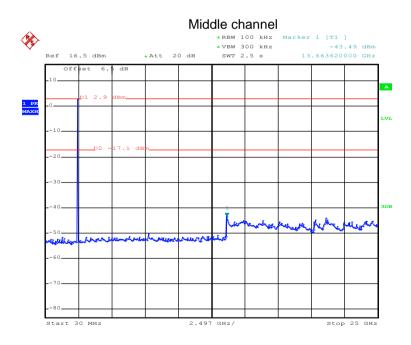

Test plot as follows:

1. The EUT was placed on the top of a rotating table 0.8m(below 1GHz) Test Procedure: /1.5m(above 1GHz) above the ground at a 3 meter chamber. The table was rotated 360 degrees to determine the position of the highest 2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna 3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading. 5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. 6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet. Test Instruments: Refer to section 5.7 for details Test mode: Non-hopping mode

Report No: CCISE170202002

Remark:

Test results:

- 1. During the test, pre-scan the GFSK, $\pi/4$ -DQPSK, 8DPSK modulation, and found the GFSK modulation is the worst case.
- 2. Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis is the worst case.
- 3. 9 kHz to 30 MHz is noise floor, so only shows the data of above 30MHz in this report.

Remark

- 1. Final Level =Receiver Read level + Antenna Factor + Cable Loss Preamplifier Factor
- 2. The emission levels of other frequencies are very lower than the limit and not show in test report.
